

SEE PUGET SOUND AOI CLEAN WATER ACT INSPECTION PRIORITY MODEL

John L Marshall

206-553-8633

Marshall.johnl@epa.gov

Project Goals

Develop relatively objective means of identifying key target Clean Water Act inspection areas in the Puget Sound Area of Interest;

Use spatially represented regulated natural resources as the basis for targeting inspection areas; and

A model that directs us to areas where our inspections are most likely to serve the highest number and most relevant (based on weighting) regulated resources at risk from violations.

SEE-Puget Sound Priority Inspection Model Area of Interest

Map and geoprocessed model compiled by John Marshall

April 29, 2013

Data Sources: See credits at end of power point presentation.

Imagery: Bing / ESRI Base Map

Buffers

Buffers were established for most of the regulated resource layers based on the following assumptions:

- Potential Clean Water Act violations can have indirect impacts on regulated resources where they are relatively proximately located;
- Mapped regulated resource boundaries are often imprecise due to the scale of mapping and relatively limited ground truthing; and
- In order to not under prioritize potential inspection target areas, regulated resource overlap opportunities should be biased towards inclusion.

Sensitive Resources of Interest

- **Hydric soils;**
- **Federally listed species and their critical habitat;**
- **Non-federally listed fish in the salmonidae family;**
- **Wetlands;**
- **Rare plants;**
- **Oak/grassland;**
- **303d streams;**
- **TMDL streams;**
- **Rivers;**
- **Eelgrass;**
- **Shellfish;**
- **Kelp; and**
- **Indian land**

Hydric Soils Layer Workflow

- Download spatial and tabular data;
- Import tabular data into NRCS Access template database;
- Create personal geodatabase in ArcCatalog and import spatial data and component table;
- Add spatial data and component table into ArcMap project;
- Use the MUKEY field to relate the spatial attribute table to the component table;
- Go to related component table and conduct SQL select by attributes query on ‘Y’ for “majcompflag” and “hydricrating;”
- Select spatial data attribute table and then export the selected ‘hydric’ soils to a geodatabase feature class.

Download Data

In NRCS Soil Data Mart, select State and county you want soils data for;

Select both spatial and tabular data for download;

Select datum and projected coordinate systems appropriate for your Area of Interest (AOI);

Provide e-mail address and submit data request; and

Go to e-mail and select FTP site url from which to find and download the data requested.

Add the soils spatial data and
component table to an ArcMap
project and then establish a
relate based on the MUKEY field

File Edit View Bookmarks Insert Selection Geoprocessing Customize Windows Help

1:1,594,527

Table Of Contents

Relate

Relate lets you associate data with this layer. The associated data isn't appended into this layer's attribute table like it is in a Join. Instead you can access the related data when you work with this layer's attributes or vice-versa.

Establishing a relate is particularly useful if there is a 1-to-many or many-to-many association between the layer and the related data.

1. Choose the field in this layer that the relate will be based on:
MUKEY
2. Choose the table or layer to relate to this layer, or load from disk:
component
3. Choose the field in the related table or layer to base the relate on:
mukey
4. Choose a name for the relate:
Relate1

Export selected hydric soils to feature class
and merge with all other selected hydric
soils layers in AOI;

Clip merged hydric soils layer to AOI
boundary;

Add integer field called ImpScore to
merged and clipped hydric soils layer; and

Use field calculator to add ‘1’ to the
ImpScore field for each hydric soils record.

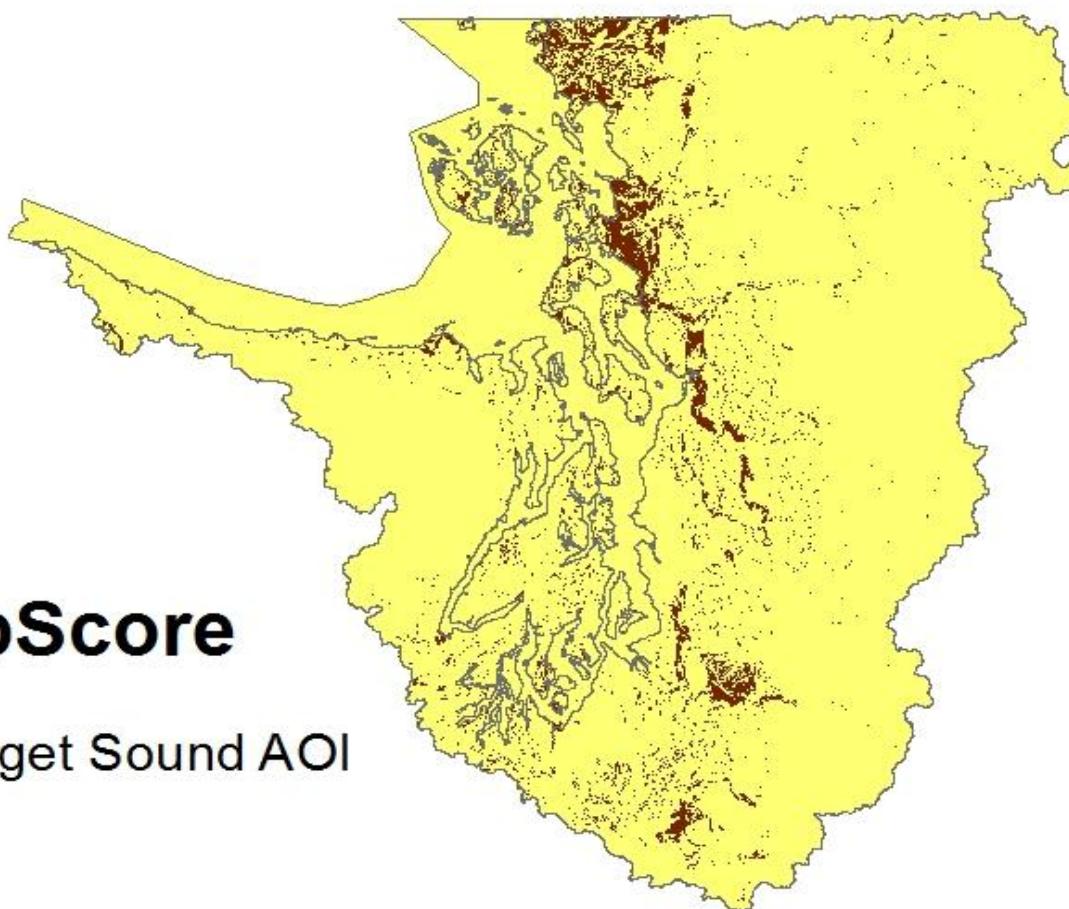

Conduct a union operation between the merged hydric soils layer and the Area of Interest layer. Make sure the Area of Interest layer is represented by a ‘0’ in the output polygon’s ImpScore field.

Convert polygon to raster targeting ImpScore field to inform output raster pixel values;

Select 10-meter resolution for pixels; and

Select same extent as Area of Interest.

SEE - Puget Sound Priority Inspection Model Hydric Soils

ImpScore

Puget Sound AOI

Applying Weighted Sum Operation Using Spatial Analyst Overlay Tools From ArcToolbox

Weighted Sum (Spatial Analyst)

ArcGIS 10

Int (Spatial Analyst)

Summary

Converts each cell value of a raster to an integer by truncation.

Illustration

1.3	1.2	0.1	0.8
	1.8	2.5	2.7
4.4	-1.9	0.7	2.9
4.6	0.0	1.7	0.5

=

1	1	0	0
	1	2	2
4	-1	0	2
4	0	1	1

InRas1

OutRas

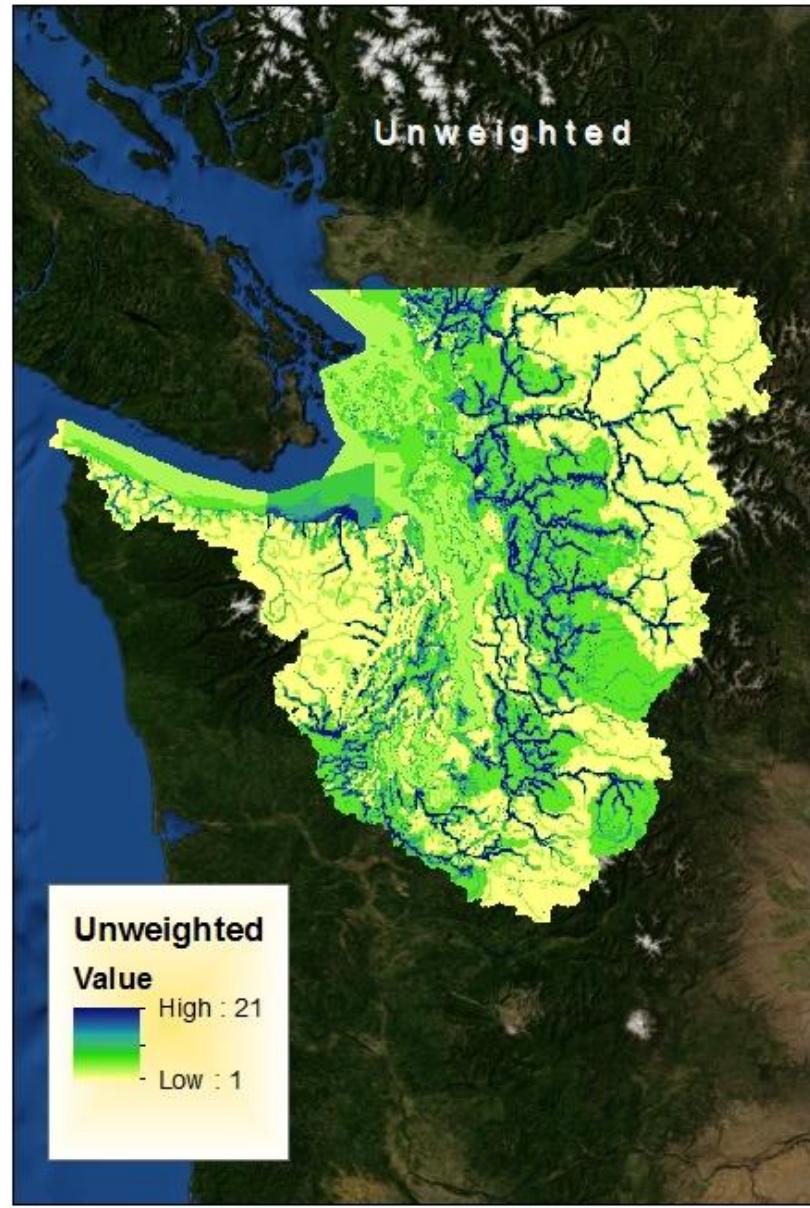

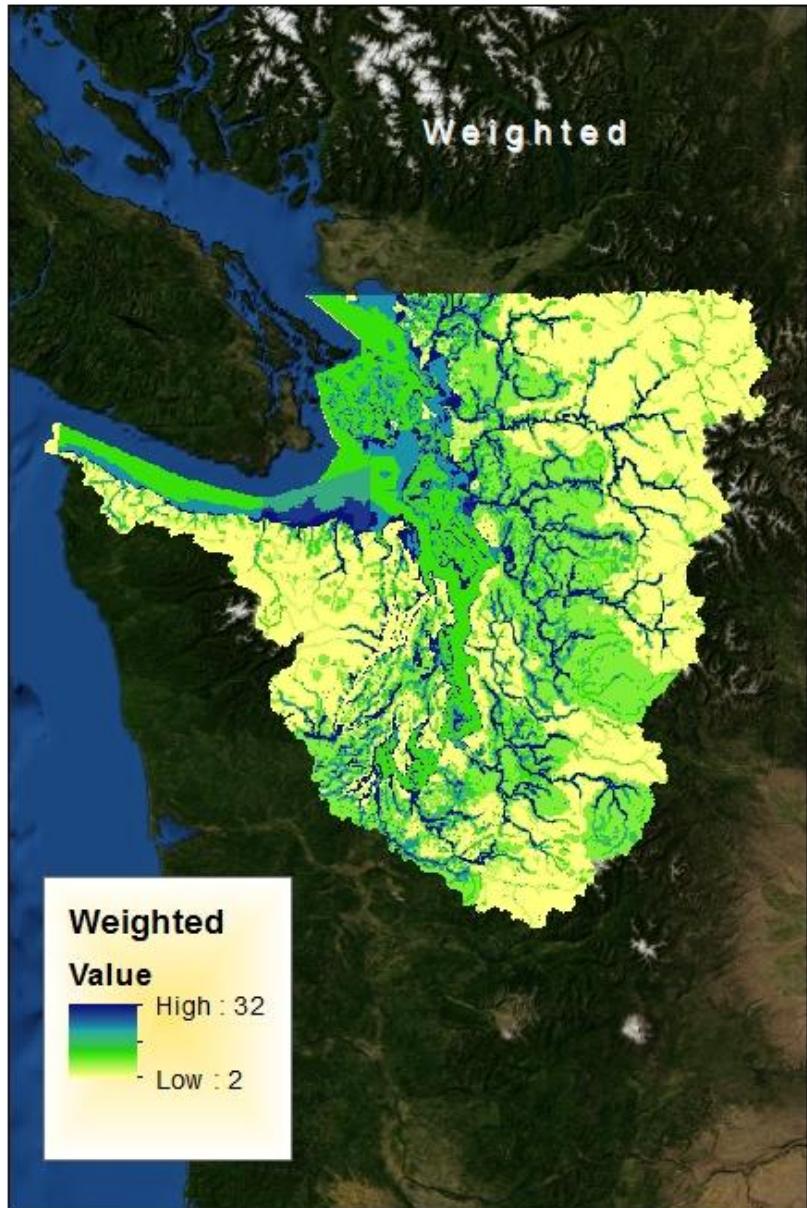

$$\text{OutRas} = \text{Int}(\text{InRas1})$$

Use spatial analyst overlay
weighted sum tool to run output
raster

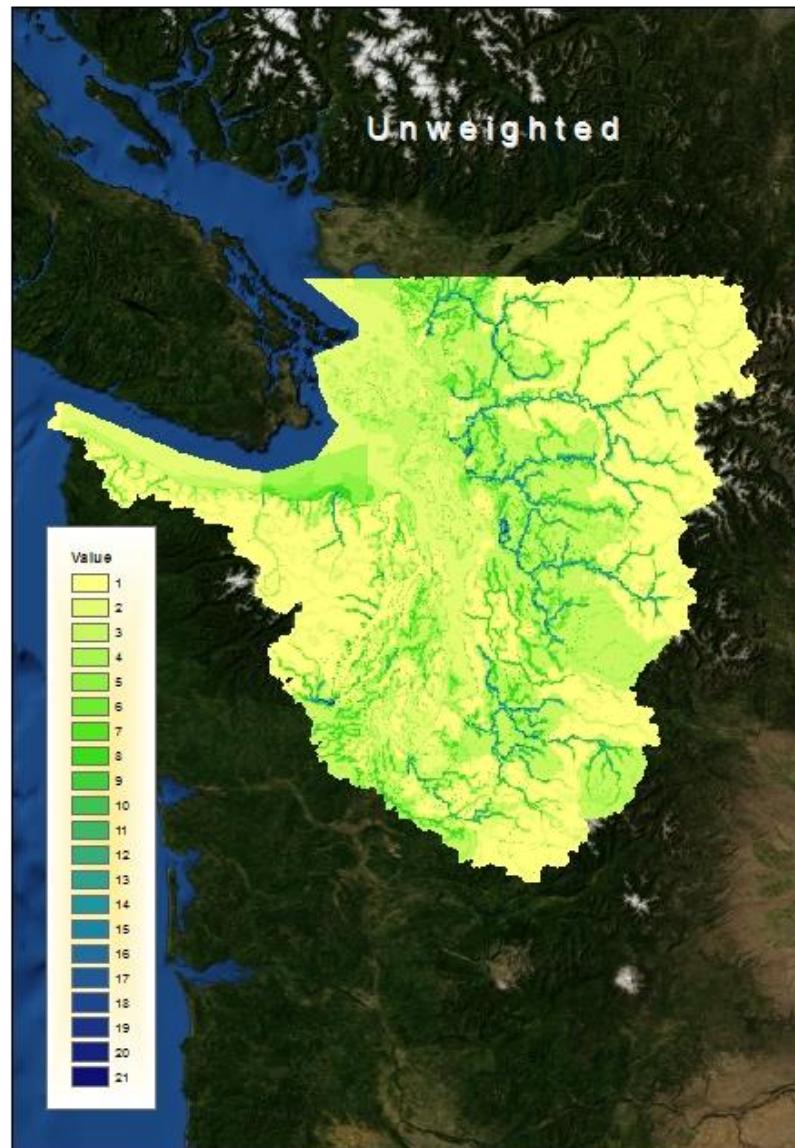

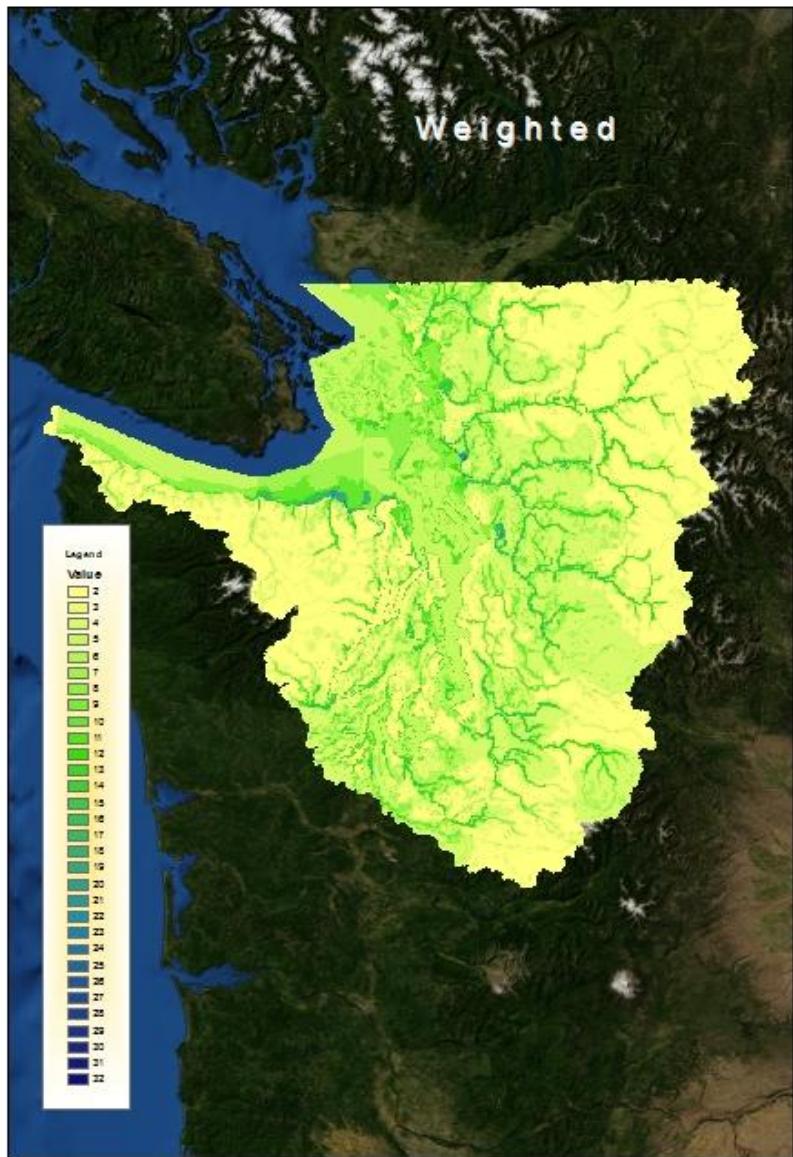

Classify and display output
raster in ArcMap layout

Export ArcMap project(s) to pdf
or other file formats for map
display and distribution

Weighted and Unweighted Raster Outputs Using Stretched Classification

Weighted and Unweighted Raster Outputs Using Unique Value Classification

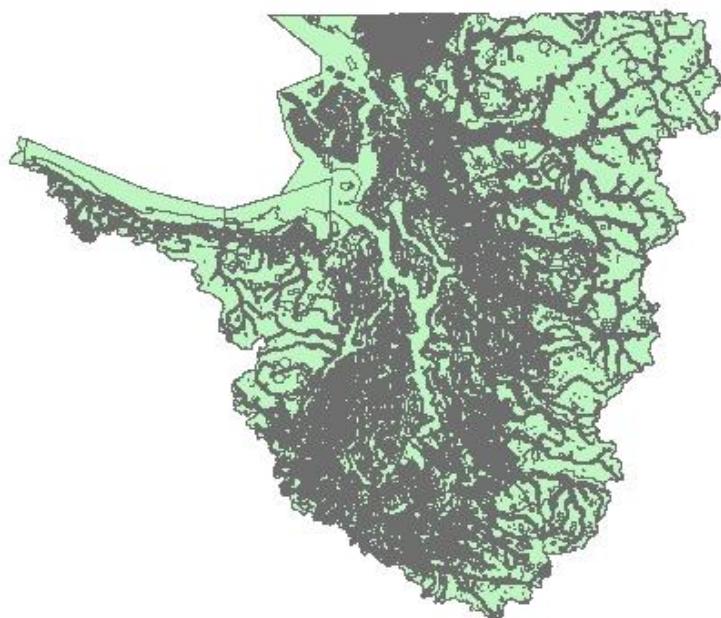

Converts a Raster Dataset to Polygon Features

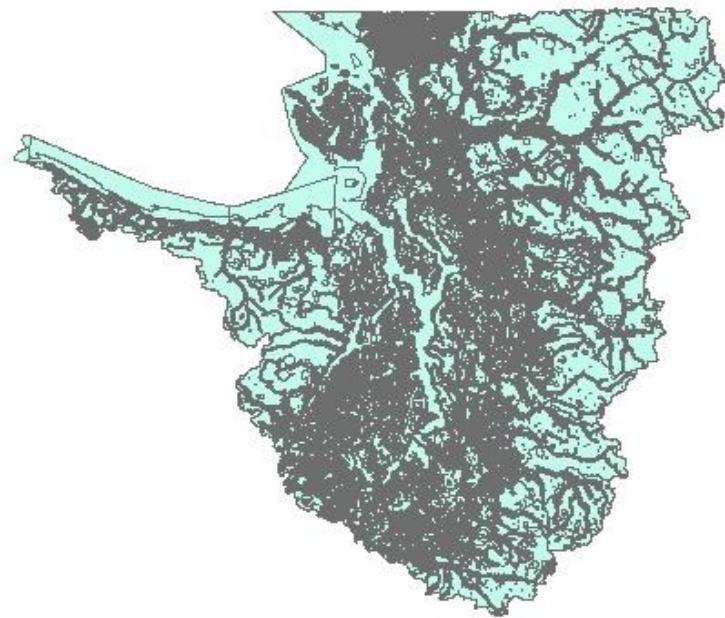

**The input raster can have any cell size and
must be a valid integer raster dataset.**

Raster to Polygon Conversion for Statistical Applications

Weighted

Unweighted

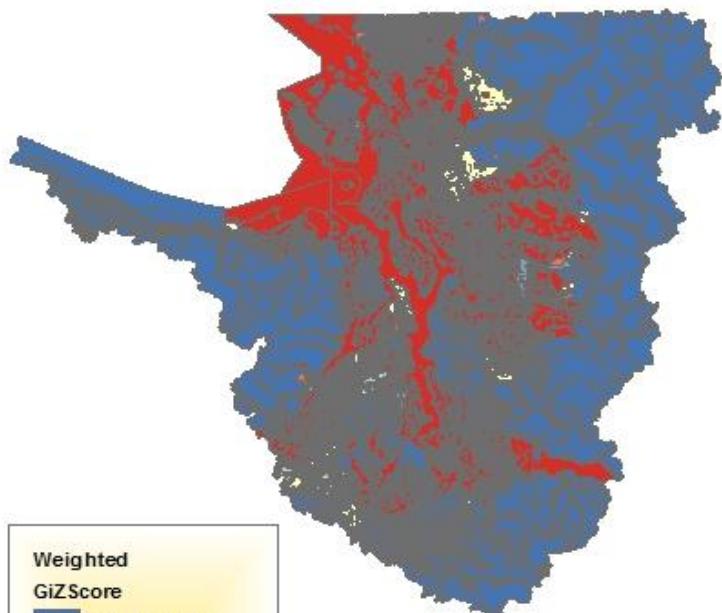

Conduct quality control procedures using statistical analyses, aerial imagery recognition, peer review, and to the degree practicable, ground truth surveys

Hot Spot Analysis (Getis-Ord Gi*) (Spatial Statistics)

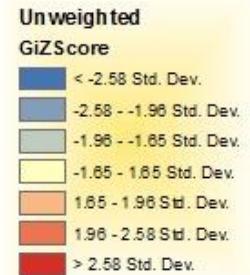

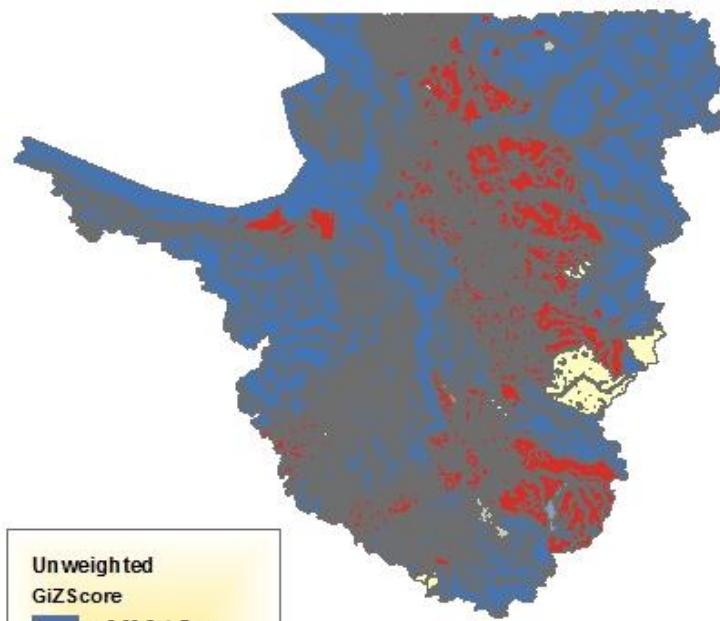

- Given a set of weighted features, identifies statistically significant hot spots and cold spots using the Getis-Ord Gi* statistic.
- This tool identifies statistically significant spatial clusters of high values (hot spots) and low values (cold spots). It creates a new Output Feature Class with a z-score and p-value for each feature in the Input Feature Class.

Getis-Ord G* Hot Spot Analysis in Puget Sound Area of Interest

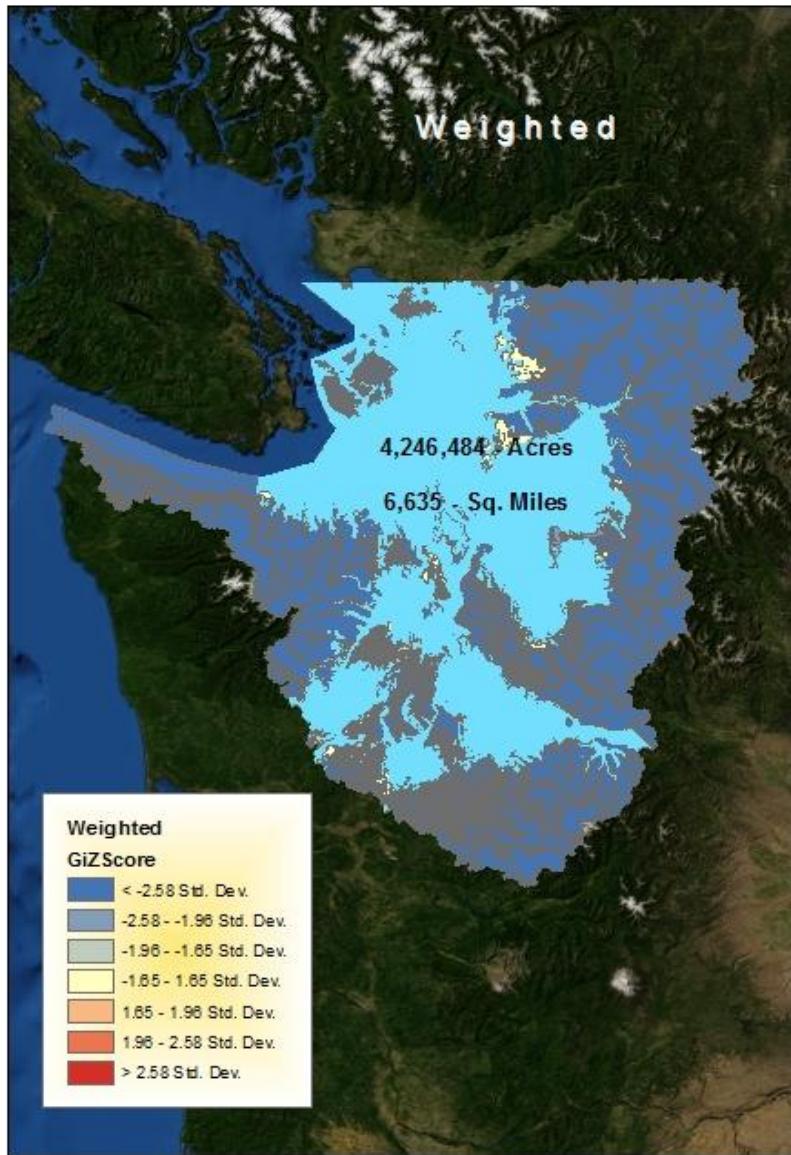

Weighted

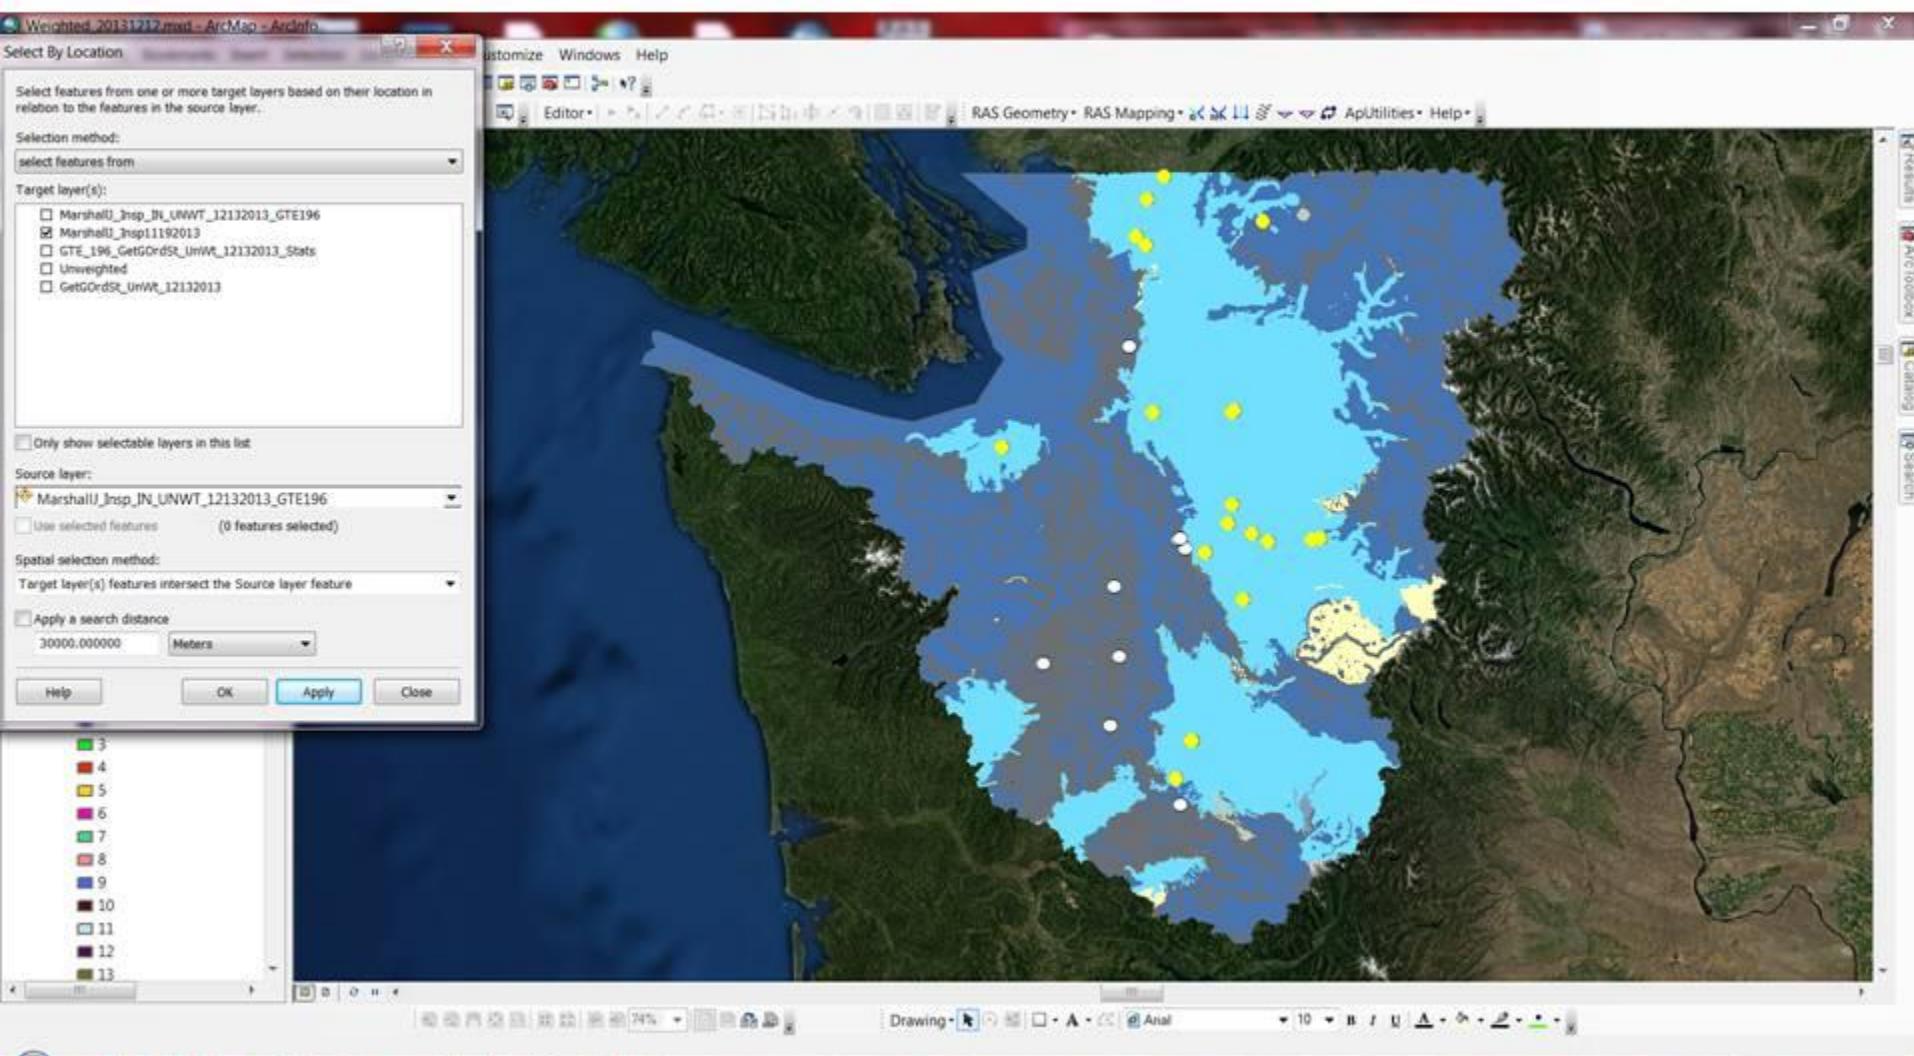

Unweighted

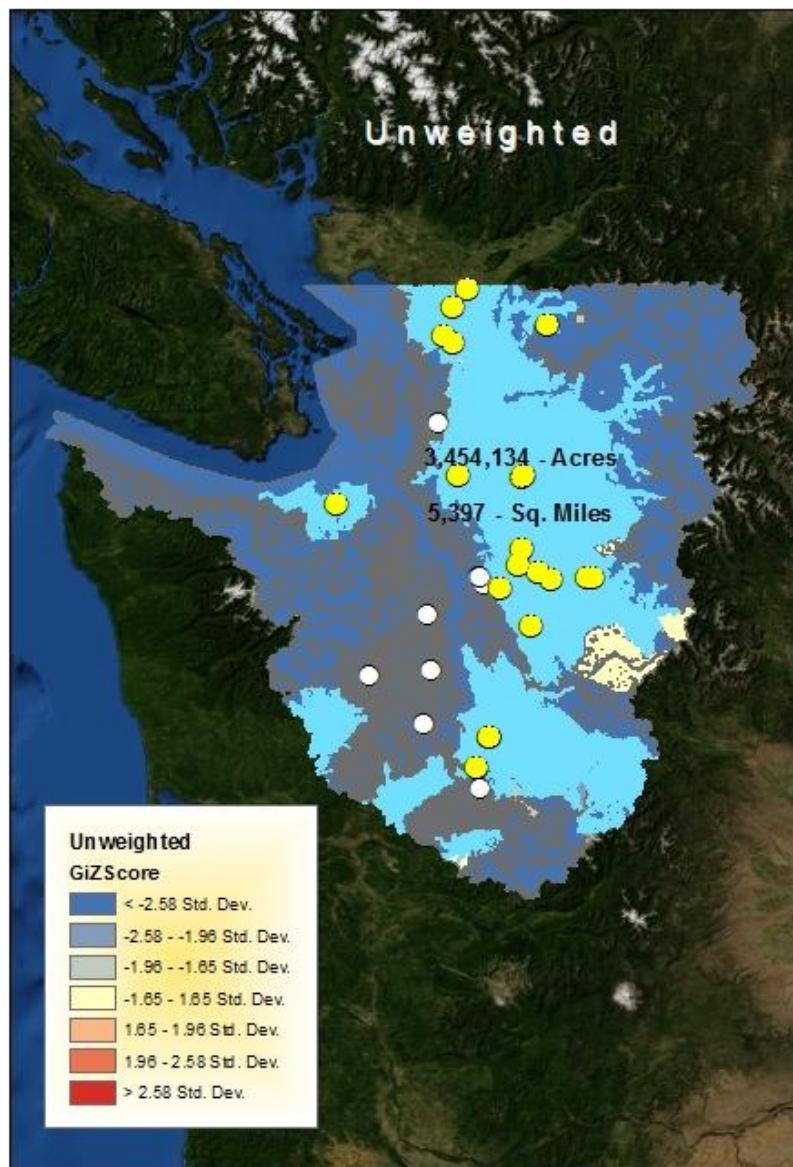

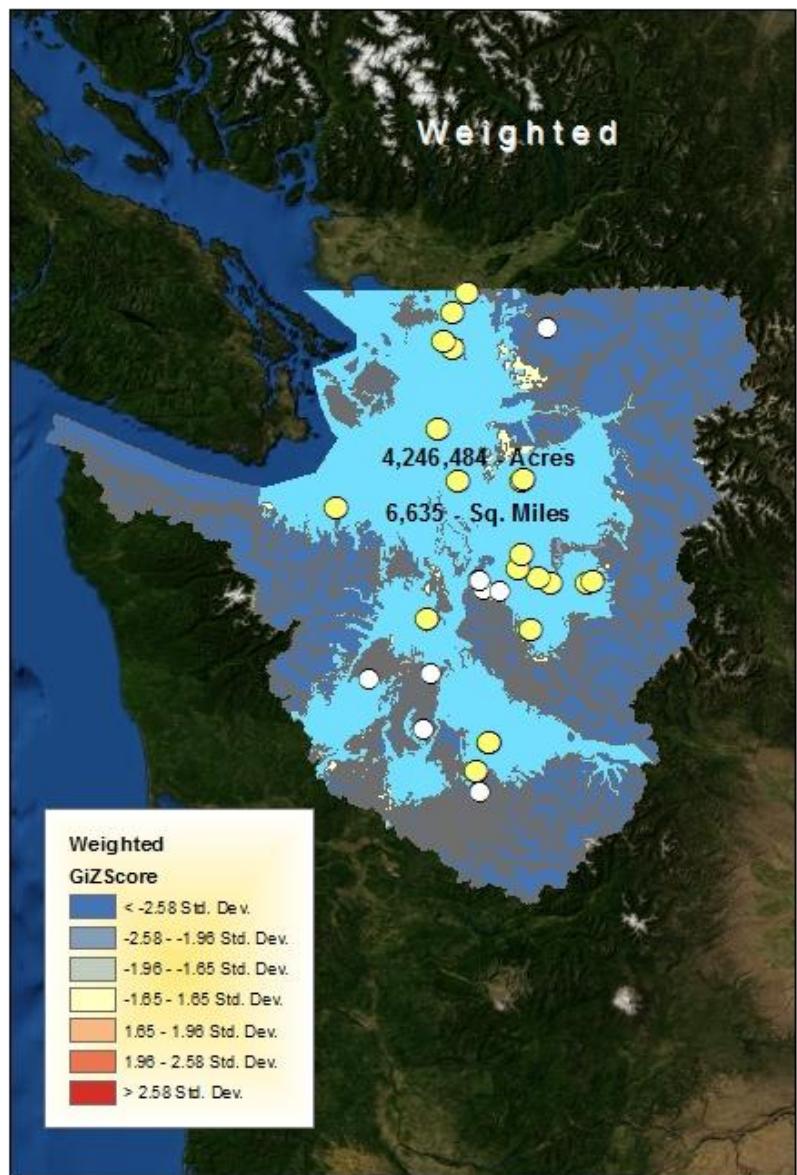

Getis-Ord G* Hot Spot Clusters $>/= 1.96$ SD in Puget Sound Area of Interest

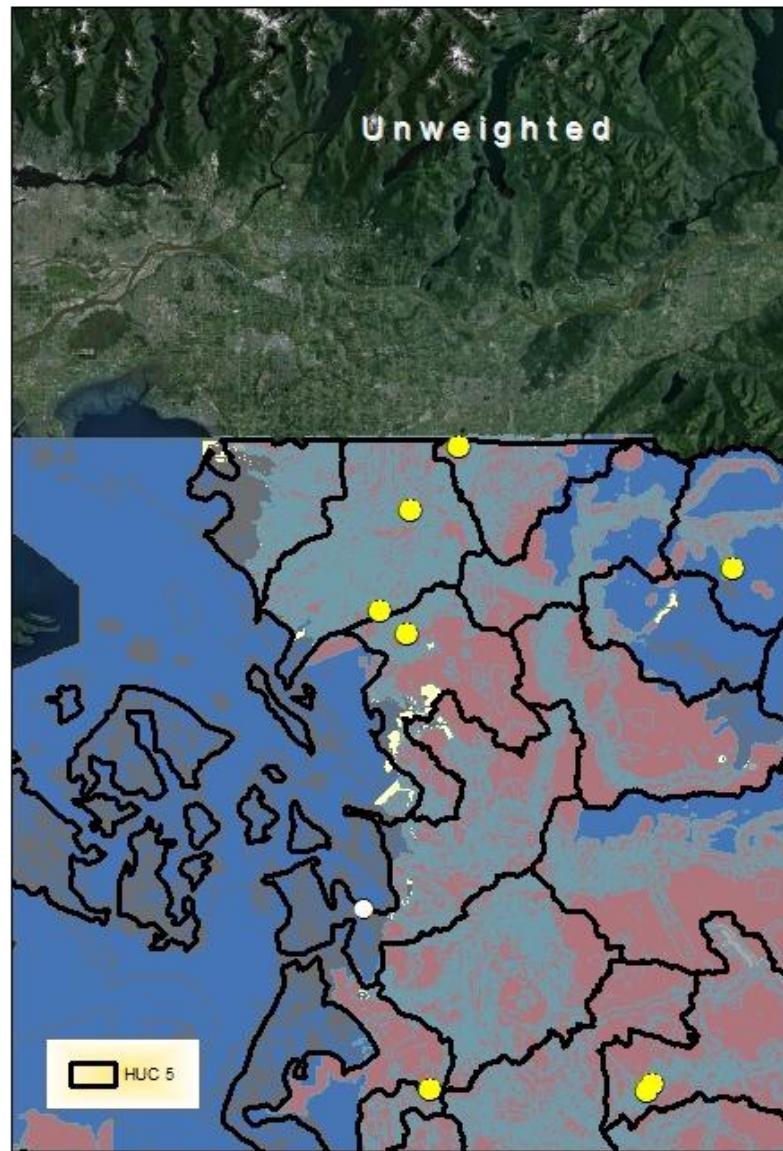

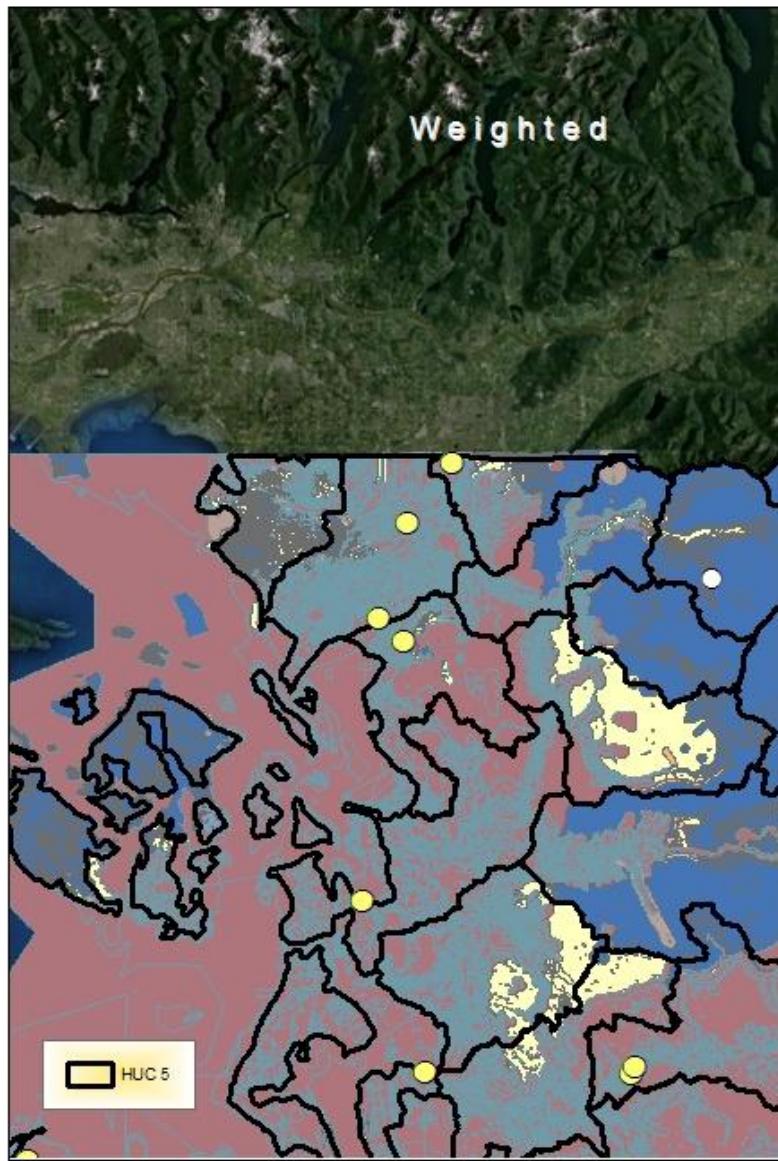

Screening Puget Sound SEE Inspections and Investigations Using Select by Location Query 2012 - 2013

Hannegan Road	Whatcom	1, 9, 10	404	5	1, 2, 3, 4, 5, 6, 7, 9		Low Ph , DO, Organic Enrichment	Washington Department of Ecology led the inspection. Two soil pits were dug to about 15-20 in on both sides of sidecast dredged material near ditch 1. Neither hole had any standing water in the bottom. Cover predominantly Lolium or disturbed bare ground	48.917715	-122.442235
Blakey Flying T Ranch	Snohomish	1, 8	404	14	1, 2, 3, 4, 5, 6, 7	Temperature, Turbidity; North Fork Stilaguamish - Amonia / Nitrogen, Temperature, Fecal Coliform (upstream) and pH, Fecal Coliform (downstream)	Temperature Completed, Turbidity Needed	WOUS wetland / stream, TNW, RPW, SN - Unknown at this time. Landowner refuses access without a warrant.	48.249344	-122.050157
Becker	Snohomish	1, 8	404	5	1, 3, 4, 5, 6, 7	Temperature; Wagner Lake - Total Phosphorous	Temperature TMDL needed; Snohomish River - Bacteria TMDL	WOUS wetland / stream, TNW, RPW, SN - Unknown at this time. Landowner deceased. Awaiting further instructions from management.	47.870421	-121.96241
Bradley	Kitsap	1	404	7	4, 5	Sam Snyder Creek - pH/Acidity/Caustic Conditions, TMDL needed; Liberty Bay - 1,2,4-Trichlorobenzene, Sediment; Liberty Bay - Temperature;	Snyder Creek - pH TMDL needed; Liberty Bay Bacteria TMDL (needed)		47.709618	-122.605886
Tahuya River	Mason	3	404	4	1, 4, 5, 8, 9, 10	Fecal Coliform	TMDL Needed for Fecal Coliform		47.471188	-122.93606

SEE Puget Sound Investigations and Inspections – (FY 2012 – 2013)

Snohomish Citizen	Snohomish	1, 8	404	3	1, 2, 3, 4, 5, 6, 7			On March 7, 2013 [REDACTED] Reports to Chan Ponghamsing that creek bed alteration (about 4ft wide x 3 ft. deep for 30-feet. Claims buried creek causing flooding on her property.	47.962946	-122.053178
Klock	Snohomish	1	404	8	13, 14		Approx 400-feet west of TMDL designation boundary - Temperature TMDL completed, Fecal Coliform TMDL needed.	Old Case - Status of enforcement action uncertain.	47.846109	-121.890515
Wilbur	Skagit	1	404	7	1, 2, 3, 4, 5, 6, 7, 17, 19, 20		Water-body Name: Snoqualmie River watershed - Parameters: Ammonia-nitrogen; Dissolved oxygen; Fecal coliform bacteria; pH; Temperature - # of TMDLs: Ammonia-N, BOD, Fecal Coliform -16; Temperature - 17	Ongoing enforcement case - status of enforcement compliance unknown.	48.460332	-122.527491
CMS Interests	Whatcom			2	8, 13, 14, 18, 20	PCB - Tissue			48.802307	-122.495532
Price	Snohomish	1	404	6	1, 4, 5, 13, 14, 20		Puyallup River Bacteria TML. WRIA: #10 (Puyallup-Whit - Parameter: Fecal Coliform - # of TMDLs: 12 - Status: Approved by EPA. Has an implementation plan	WOUS wetland, TNW, RPW, SN - Unknown at this time.	48.253462	-122.417196
Ota	Pierce	1	404	6	1, 2, 3, 4, 5, 6, 7, 8, 11, 13, 14, 17, 18, 19, 20	Fecal Coliform	Parameters: Dissolved oxygen, Fecal coliform bacteria, Mercury, pH, Temperature - # of TMDLs: DO, FC, Mercury, pH - 46 Temperature - 10 Status: DO, FC, Mercury, pH - approved Temperature - approved Has a multi-parameter implementation plan	Ongoing enforcement case - status of enforcement compliance unknown.	47.228599	-122.255115

SEE - Puget Sound Possible Inspection Priority in Sumas River Area

Map and geoprocessed model compiled by John Marshall

March 1, 2013

Data Sources: See Listed.

The priority classification used is preliminary and not peer reviewed at this time.

Aerial view of a wetland area. A road labeled "95" runs through the top left. A red polygon outlines a sampling area with four points numbered 1, 2, 3, and 4 marked by yellow dots. The terrain is a mix of green grass and brown soil.

Summary

- The model is useful at identifying general areas of highly sensitive (mostly aquatic) resources at a small scale (e.g., about 1:500,000 or smaller) which translates to large areas.
- The statistical spatial autocorrelation screen indicates large regions where high value pixels (informed by the sensitive resource data layers used) are clustering in a pattern that has very little chance of being random. This does not mean in any absolute sense that a given spot inside the statistical screen is of high resource value or that a given spot outside the statistical screen is of low resource value.
- Therefore, the model should not be used to characterize the resource value of a specific site location. The data informing the model were mapped at too coarse a scale (large area) to be reliable indicators of resource presence or absence at the site level.
- The model can be used to help prioritize incoming violation complaints for inspections of suspected violations or to help prioritize “search areas” to look for possible new undetected violations.
- Statistical screens can be augmented (e.g., HUCs, county lines, etc.).
